# NCHOR TAG

The anchor  $(\langle a \rangle)$  tag, creates a link on your site that can be internal or external.

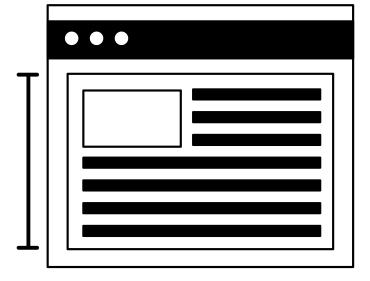

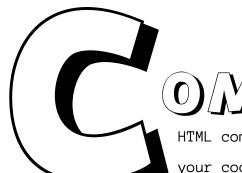

<a href = "https://www.example.com"> Go! </a>

# The body (<body>) tag, indicate

The body (<body>) tag, indicates all of the contents that will be on your site.

```
<body>
// Website content
  (text, images, etc.)
</body>
```

#### OMMENTS

HTML comments (<!-- text -->) let you make notes in your code that won't show up on your website!

#### o index.html

- 1 <html>
- 2 <!-- the body of your
- 3 site will go below -->
- 4 <body>
- 5 </body>
- 6 </html>

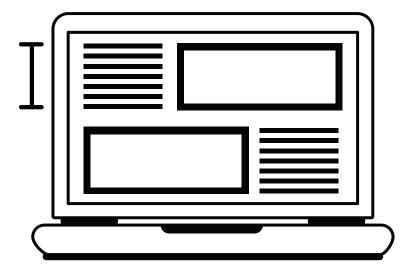

### IV TAG

The div (<div>) tag, indicates a section of code in an HTML document and site.

<div>
// A section of code

</div>

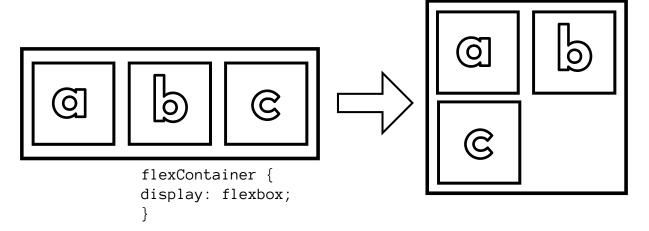

An HTML editor is where you write your code. Editors can be on your computer or online!

0	index.html

2	
3	
4	
5	
6	

A flexbox allows you to create a container of items that move flexibly when a sites layout changes.

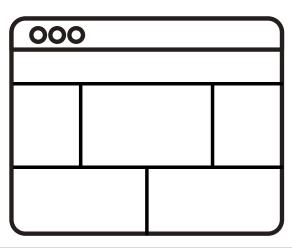

#### RID

A grid is a hidden structure that contains rows and columns that you can put content into!

gridContainer{
display: grid;

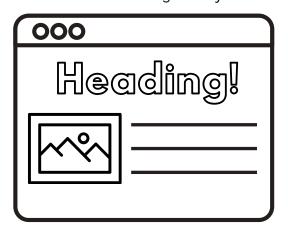

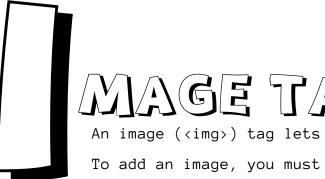

#### EADINGS

Headings help break up the text on your website!

You have seen headings in your textbooks, too!

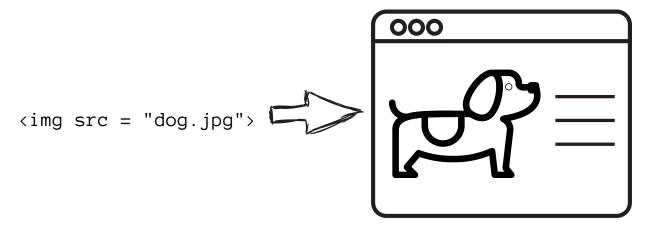

<h1> Heading! </h1>

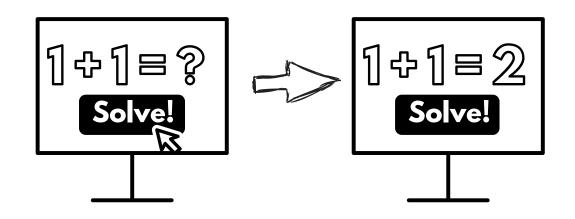

An image (<img>) tag lets you add images to your website!

To add an image, you must include its source, or src.

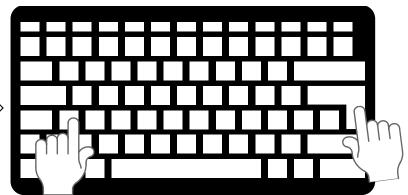

developers use to control the behavior of a site.

A keyboard (<kbd>) tag indicates text (via different styling) a user should type on their computer.

<kbd> Shift + A </kbd>

## IST/LIST ITEM

List ( $\langle ul \rangle$  or  $\langle ol \rangle$ ) tags allow you to create lists on your site. To create a list, you have to also create a list item using the tag.

<u1>

Apples

Oranges

Apples Oranges
